Dhruv Ramasubban

dhruv.ramasubban@berkeley.edu | San Francisco, CA | https://www.linkedin.com/in/dhruv-ramasubban/

EDUCATION

University of California, Berkeley **Berkeley, CA**
Bachelor of Arts in Computer Science and Applied Mathematics **Major GPA: 3.8/4.0** May 2028
Relevant Coursework: Structure and Interpretation of Computer Programs, Multivariable Calculus, Data Structures and Algorithms, Discrete Mathematics and Probability, Linear Algebra, Principles and Techniques of Data Science

WORK EXPERIENCE

Wrodium **Berkeley, CA**
Founding Engineer October 2025 - Present

- Developed LLM-ready indexing for 100+ pages/site at 90% link coverage, by automating llms.txt manifests.
- Accomplished <1% duplicate IDs across reruns, by streaming 5-30 atomic claims/page via stable-hash deduplication.
- Achieved 300+ cited outputs/day by normalizing prompt-answer-source pipelines at 100 prompts x 3 engines/day.

Actor Labs **Redwood City, CA**
Founding Engineer April 2025 – August 2025

- Built end-to-end data pipelines ingesting and processing multi-terabyte field sensor streams (RTK GPS, LiDAR, camera) into a queryable store, enabling reproducible downstream analysis and model training.
- Designed Python/SQL ETL workflows that cleaned, fused, and aggregated raw sensor data, cutting analysis turnaround and powering a 72% mAP@0.5 detection model on the curated dataset.
- Stood up automated dashboards and metrics to surface field-deployment performance to stakeholders, replacing manual ad-hoc reporting.

Descartes Learning Club **San Francisco, CA**
Course Designer March 2025 - Present

- Designed and structured course curricula in math, statistics, and computer science, sequencing concepts to build from intuition to rigorous application.
- Analyzed student performance data across cohorts to identify common failure points, then redesigned lessons and practice sets to target those weak areas.

LEADERSHIP & INVOLVEMENT

Berkeley Formula Racing **Berkeley, CA**
Vehicle Dynamics Member August 2025 – Present

- Wrote Python/scikit-learn workflows to model tire-load-to-cornering behavior ($R^2 > 0.85$), enabling data-driven suspension tuning that improved lap times ~7%.
- Designed reproducible analysis notebooks and metrics that let team engineers self-serve telemetry insights instead of requesting one-off queries.

Mathworks, Inc. **Berkeley, CA**
Campus Ambassador April 2025 – Present

- Directed hands-on drone path Simulink workshop for student orgs, increasing student participation by 40%.
- Organized technical workshops, student competitions, and department partnerships to increase Simulink adoption.
- Enabled students' access to MATLAB resources by hosting demos aligned with academic and research use cases.

PROJECTS

CubeCoach **Berkeley, CA**
Founder August 2025 – Present

- Accomplished 88% Rubik's Cube move classification at 30 fps, by stacking YOLOv8, MediaPipe, and TensorFlow.js into a fully in-browser pipeline requiring no install or backend.
- Achieved 90% detection across 15+ solve metrics (TPS, pauses, regrips), by shipping a client-side feedback engine that processes hand and cube state in real time at 60ms latency.

ModelArena **Berkeley, CA**
Founder January 2026 – Present

- Built a fully client-side ML experimentation platform with a visual drag-and-drop architecture builder, enabling real-time model design, training, and inference across 5 interactive environments (CartPole, Snake, Chess, etc.)
- Designed an interactive training interface for reinforcement learning (Double DQN) with live tensor-shape propagation, Q-value visualizations, and in-app diagnostics (plateau/oscillation detection and corrective hints)

SKILLS & INTERESTS

Skills: Python, SQL, Java, Spark, Kafka, Airflow, dbt, Snowflake, Databricks, AWS, GCP, Docker, Kubernetes

Interests: Running, Golf, Tennis, Skiing, Scuba Diving, Standup Comedy
